
Lab3: Flight Simulator

Background image is a cloud image which moves in an infinite loop. **background-repeat: repeat-x;** is used to repeat the image horizontally in a loop. Then an aero plane image is added in the page, and in css its position is defined that it is supposed to move horizontally up to 1000px, and then using **:active** property of CSS, image is transited from parent position to 1000px. So when a user clicks on image it starts moving and reach 1000px position, and when user leaves the click it moves backs to its original position.
